

# Powerhouse software Aangine: Making a Difference to Turkey's Yapi Kredi Bank

With more than 18,500 employees, 13 million customers and 850 branches, Yapi Kredi, is one of Turkey's leading commercial banks. When looking to propel productivity to new heights and significantly ease the challenge of completing projects via remote working, it chose Aangine, a problem-solving Portfolio Planning solution that is ideal for firms faced with the challenge of running dozens - sometimes hundreds - of projects remotely at the same time.

With R&D by Dublin based firm, Continuous Software and available from Xcentuate [www.xcentuate.com](http://www.xcentuate.com) Aangine is a one-of-a-kind, world class software solution developed in Ireland for use by the Finance, Telco and Pharma sectors. It is also rated a 5-star product by the internationally respected Gartner Peer Insights.

Putting Aangine into action at Yapi Kredi Bank as a planning tool required no change in process, roles involved or culture, while bringing significant benefits to the individual stakeholders during the planning phase, and to the bank while delivering the projects.

The results were impressive, delivering:

- ✓ 62% more projects delivered on time
- ✓ 22% more projects planned in portfolio
- ✓ 36% more projects complete each year
- ✓ The speed of planning increased; time taken reduced from days to minutes

Empowered by algorithms specifically developed for the purpose, Aangine works with existing project management tools to bring them together into one single programme view and transform the process of portfolio planning. It is an automated software that is easy to use remotely or on-premises and starts to deliver results that can be seen quickly. It can be deployed quickly in the Cloud or On-Premises to get a firm up and running as fast as possible thanks to its modern microservices architecture.

Before starting to use Aangine, the Bank captured their actual project success carefully for the previous year for their manually planned portfolio. While preparing for the actual planning, Yapi Kredi stakeholders discovered the flexibility enabled by the automated Aangine tool:

- Applying changes to the portfolio easily and quickly.
- Visualising the impact of changes on scenarios immediately.
- Having Business Units evaluate the scenarios instantly instead of taking weeks to do so compared to manual-planning approach.
- Eliminating unnecessary delays in planning by PMO team having to spend up to a week just to incorporate even small changes into the Portfolio Plan
- Giving power to the stakeholders to access the updated and always accurate roadmap at any time during the planning stage.
